

TUUSHAR V KALOKKHE

DATA ENGINEER | AZURE | DATABRICKS | PYSPARK | ADF | SQL

Mobile: +91-9921255625 | Email: kalokkhetv@outlook.com

PROFESSIONAL SUMMARY

Results-driven Data Engineer with almost 6 years of experience in ETL/ELT development, data integration, data warehousing and cloud data engineering. Strong hands-on experience with Azure Data Factory, Azure Databricks, PySpark, Python, SQL and Azure Data Lake Storage. Experienced in building scalable data pipelines, migrating legacy ETL workloads, implementing data quality controls, optimizing large-scale processing and supporting enterprise analytics.

PROFESSIONAL HIGHLIGHTS

- Nearly 6 years of experience across data engineering, ETL/ELT development, data integration, analytics and data warehousing.
- Strong Azure data engineering experience with Azure Data Factory, Azure Databricks, ADLS Gen2 and Azure SQL Database.
- Hands-on experience modernizing legacy Informatica PowerCenter workloads into scalable PySpark and Lakehouse-based solutions.
- Strong SQL and distributed-processing skills with focus on performance tuning, data quality and reliable production pipelines.
- Experience with GitHub Enterprise and Jenkins for version control, CI/CD automation and deployment workflows.
- Comfortable collaborating with business users, technical teams and stakeholders to deliver analytics-ready datasets.

TECHNICAL SKILLS

Programming	SQL, Python, PySpark
Azure	Azure Data Factory (ADF), Azure Databricks, Azure Synapse Analytics, Azure Data Lake Storage Gen2 (ADLS), Azure SQL Database
ETL / ELT	Azure Data Factory, Informatica PowerCenter
Databases	Oracle, DB2
Data Engineering	Delta Lake, Lakehouse Architecture, ETL/ELT, Data Warehousing, Data Integration, Data Quality
DevOps / Tools	Git, GitHub Enterprise, Jenkins, JFrog Artifactory, WinSCP, Atomic CDA
Monitoring / Support	Jira, ServiceNow, Airflow, Atomic CDA

CLOUD & RELATIONAL DATABASE EXPERIENCE

- Cloud Platform: Microsoft Azure — Azure Data Factory, Azure Databricks, ADLS Gen2, Azure Synapse Analytics and Azure SQL Database.
- Relational Databases: Oracle, IBM DB2 and Azure SQL Database; experience in SQL development, data validation, query optimization and performance tuning.

PROJECT #4 — DATA INTEGRATION

Data Integration | Client: USCC / T-Mobile (TMO)

Project Overview: Data Integration team supporting day-to-day business operations by integrating external and internal systems through approximately 400+ interfaces serving a variety of business functions.

- Designed and developed end-to-end ETL/ELT data pipelines for telecom data using Python, SQL and PySpark.
- Ingested data from telecom source systems such as CRM, billing systems, network logs and Call Detail Record (CDR) systems into Azure Data Lake Storage (ADLS).

- Processed large-scale telecom data using Azure Databricks and PySpark for batch data processing and analytics.
- Developed incremental and full-load data pipelines using Azure Data Factory (ADF).
- Contributed solutions based on Databricks Lakehouse architecture, Delta Lake and distributed data processing concepts using Apache Spark and PySpark.
- Performed data cleansing, transformation and validation to ensure data accuracy and quality.
- Built robust data transformation and validation processes to ensure data quality, consistency and integrity across datasets.
- Leveraged GitHub for version control and Jenkins for CI/CD automation, enabling streamlined deployment and release management.

PROJECT #3 — IDW UPGRADE

IDW Upgrade | Client: MetLife Insurance

Project Overview: Migrated enterprise ETL applications from Informatica PowerCenter to an Azure Databricks Lakehouse platform by converting workflows and transformation logic into scalable PySpark-based data pipelines. Enhanced processing performance, streamlined orchestration and enabled cloud-based analytics while maintaining data accuracy and reliability.

- Led migration of enterprise data integration workloads from Informatica PowerCenter to the Azure Databricks Lakehouse platform.
- Developed scalable, cloud-native data pipelines using PySpark, Databricks and Azure data engineering services.
- Converted legacy ETL workflows, mappings and business transformation logic into optimized Spark-based processing frameworks.
- Implemented ingestion, transformation, validation and reconciliation processes to ensure data quality and consistency.
- Leveraged Azure Databricks and cloud architecture to improve performance, scalability, operational efficiency and maintainability.
- Supported modern analytics and reporting through a robust Lakehouse-based data engineering ecosystem.

PROJECT #2 — TREASURY WORKSTATION (TWS)

Treasury Workstation (TWS) | Client: MetLife Insurance

Project Overview: Enterprise financial platform supporting cash management, portfolio processing, bank transactions, wire transfers and automated data feeds. The platform integrates data from multiple internal and external sources to provide reliable, high-quality datasets for financial reporting and business analytics.

- Analyzed business and functional requirements to design scalable data solutions.
- Developed and maintained data pipelines for ingestion, transformation and processing of financial data.
- Implemented data cleansing, validation and quality checks to ensure accurate and consistent datasets.
- Developed reusable and parameterized ETL/ELT frameworks to improve scalability and maintainability.
- Optimized data processing jobs and SQL queries for improved performance.
- Collaborated with business users and stakeholders to deliver analytics-ready data solutions.
- Utilized GitHub and Jenkins for version control and CI/CD-based deployment workflows.
- Worked with Databricks, PySpark, Delta Lake and Lakehouse concepts to support modern data engineering initiatives.

PROJECT #1 — AUTO & HOMES DATA WAREHOUSING

Auto & Homes Data Warehousing | Client: MetLife Insurance

Project Overview: Enterprise data warehousing initiative focused on integrating data from multiple source systems and files into centralized reporting and analytics platforms. Leveraged data warehouse concepts, ETL processes and cloud data engineering practices to deliver reliable, high-quality data solutions.

- Analyzed business requirements and developed scalable ETL/ELT data pipelines using Informatica and modern data engineering practices.
- Implemented business transformation logic to process and integrate source-system data into target data platforms.

- Performed SQL optimization, data validation and performance tuning to improve pipeline efficiency and data processing performance.
- Developed and maintained data ingestion and transformation workflows supporting enterprise reporting and analytics.
- Automated batch processes using UNIX scripting and scheduling tools to ensure reliable data delivery.
- Monitored data pipelines, provided production support and resolved data quality and performance issues.
- Participated in unit testing, defect resolution and end-to-end validation of data workflows.
- Collaborated with business and technical teams to support data modernization initiatives aligned with Databricks and Azure Data Factory.

KEY PROFESSIONAL CAPABILITIES

ETL / ELT Development Data Quality & Validation	Azure Data Engineering Production Support	Data Pipeline Optimization CI/CD & Release Management
--	--	--

EDUCATION

Master of Computer Applications (MCA) — University of Pune

CORE TECHNOLOGY STACK

Azure Data Factory • Azure Databricks • ADLS Gen2 • Azure Synapse Analytics • Azure SQL Database • PySpark • Python • SQL • Delta Lake • Lakehouse • Informatica PowerCenter • Oracle • DB2 • GitHub • Jenkins • JFrog Artifactory

ADDITIONAL TOOLS

Monitoring: Prometheus, Grafana, Splunk, Airflow

Delivery / Support: Jira, ServiceNow, WinSCP, Broadcom CDA, Atomic CDA

DATA ENGINEERING • CLOUD • ETL/ELT • ANALYTICS
