Email: kalokkhetv@outlook.com

Career Objective:

Experienced ETL Developer 5 years and 11 months of expertise in designing, implementing and optimizing data pipelines and integration workflows. I am seeking a challenging position where I can leverage my proficiency in Informatica and my understanding of Data Warehousing concepts to deliver high quality, scalable data solutions that drive business insights and decision making. Currently I am upskilling in **Databricks** to enhance expertise in modern **data engineering** and analytics platforms.

Summary:

- An IT professional with 5 years and 11 months of experience in IT industry in **Informatica Power Center, Oracle, SQL and Data Warehousing**.
- Worked on various phase of data warehouse development lifecycle from gathering requirement, ETL Design and Implementation and warranty support on applications.
- Designed and developed **Informatica PowerCenter 9.x/10.x** mappings, sessions and workflows for complex ETL processes.
- Used **GitHub / GitHub Enterprise** for version control and code management.
- Integrated ETL code with **Jenkins** for CI/CD pipelines.
- Managed artifacts using **JFrog Artifactory**.
- Supported automated deployments using **Broadcom CDA**.
- Performed **Data Cleansing, Scrubbing and Transformation** to ensure accuracy and resolve data anomalies, consistency, and quality of data before loading into target systems.
- Hands on experience on transformation like **Expression, Lookup, Source Qualifier, Router Aggregator, Update Strategy, Joiner, Filter, Sequence Generator and Sorter** etc.
- Experience in developing mappings, sessions, workflows and support with development for Performance tuning by resolving bottlenecks in various levels like sources, targets and mappings.
- Implemented **CDC and Slowly Changing Dimension (SCD Type II)** on dimension tables by Date Method and used Static, Persistent Cache to access full history of tables.
- Used debugger in identifying bugs in existing mappings by analyzing data flow and evaluating transformations.

- Effectively worked in Informatica version base environment and used deployment groups to migrate the objects from DEV to QA and PROD.
- Have knowledge of Data Warehouse concepts like Star schema, Snow Flake schema, Dimensions tables and Fact tables.
- Hands on and good knowledge of Oracle SQL queries and written UNIX script to executes Informatica jobs.
- Ability and willingness to learn new technology and deliver results in a timely manner.

Technical Skills:

ETL Tool	: Informatica PowerCenter 9.x, 10.x
Database	: Oracle Database v19c, IBM Data Studio DB2, SQL Server
Languages	: SQL, Unix
Other Tools	: Putty, WinSCP, GitHub Enterprise, Jenkins, JFrog ArtiFactory, TWS Scheduler, Jira, , Broadcom (Atomic CDA), HP ALM QualityCenter, Service Now

ETL Project Profile:

Project #4

Project Title	: DATA INTEGRATION
Client	: USCC/T-Mobile
Environment	: Informatica Power Center 10.5, Oracle Database v19c, Jira, GitHub Enterprise, Jenkins, JFrog ArtiFactory, Broadcom CDA, HP ALM QualityCenter

Project Summary:

Data Integration team facilitates day-to-day operations of the business by integrating both external and internal systems which naturally don't talk to each other. Data Integration has approximately 400+ distinct interfaces servicing vast varieties of business functionalities.

Responsibilities:

- Designed and developed Informatica PowerCenter mappings, sessions, and workflows for efficient data extraction, transformation, and loading (ETL) from Oracle databases and flat files.
- Built incremental, full CDC-based data loads for ODS and Data Warehouse layers.
- Handled slowly changing dimensions (SCD Type 1 & Type 2) and historical data management.
- Integrated with ETL code via GitHub, Jenkins for CI/CD pipelines for smooth deployment process.

- Creating change requests (CRQ) of corresponding change tasks required for go-live of each application via Remedy tool.
- Creating Install and backout plan documents for the go-lives of the application in the upgraded version of Informatica.
- Performed application deployments using Atomic CDA, including workstation fencing to validate and execute deployments in a controlled environment prior to go-live.
- Validated production deployments by verifying that all post-deployment code changes were correctly reflected and functioning as expected.

Project #3

Project Title : IDW Upgrade
Client : MetLife Insurance
Environment : Informatica Power Center 9.6/10.4, Oracle, DB2, WinSCP, Unix, Windows 10.

Project Summary:

IDW Informatica upgrade where IDW Informatica server is being upgraded to version 10.4 from 9.6. As part of IDW Informatica upgrade, existing Informatica server will be replaced by new Informatica 10.4 server, and due to this existing source process will be impacted as the source files need to be in IDW Informatica 10.4 server rather than existing IDW Informatica 9.6 server.

Responsibilities:

- Testing the UNIX scripts which consist of sequential flow (including the Informatica workflows and UNIX shell scripts) of loading source files to the final DB2 target table.
- Creating change requests and corresponding change tasks required for smoke testing and go-live of each data mart via. Service Now tool.
- Creating Implementation and Backout plan documents for the go-lives of the Marts in the upgraded version of Informatica.
- Preparing smoke testing scripts of each mart in order to execute them before going live, to ensure that the environment is perfectly set for the go live.
- Preparing job definitions for the maestro tool, which are required to trigger the UNIX scripts in order to execute the sequential flow of loading source files to the final DB2 target table.
- Working on the enhancements of the existing mappings/workflows in order to implement the PTASKs (Problem tasks) raised by the user via service now tool.

Project #2

Project Title : Treasury Workstation TWS
Client : MetLife Insurance
Environment : Informatica PC 9.6/10.4, Oracle, DB2, WinSCP, UNIX Shell Scripting.

Project Summary:

Treasury Work Station (TWS) is a Client-Server cum Web-based product built using VB/VB.NET (by SunGard), Oracle and Crystal reports software. Various application functions include daily Cash management, Portfolio processing, Net Asset Value processing, Bank transaction loads, Wire Transfers, automated feeds and verification processes. TWS uses DTS – an interface Mapping Tool to map feeds received from external agencies into MetLife.

Responsibilities:

- Analyze the business requirement and functional specification.
- Implemented data cleansing and scrubbing in Informatica to identify anomalies and eliminate inaccurate or inconsistent data, ensuring high-quality datasets for business analysis.
- Created a mapping according to the requirement of the client. Which consisted transformation like aggregator, joiner, expression, filter, update strategy, union and look up.
- Worked on different task in workflow manager like session, assignment and email of the workflow.
- Created mapping which included Transaction Control transformation and other transformations for implementation of business logic to generate multiple output files from multiple input files of same structure.
- Defined and worked with creating mapping parameters variables.
- Debugging and Performance Tuning of targets, mappings and sessions, as per the defects
- Attending Status meetings and daily scrum calls with the client and Business Users.

Project #1

Project Title : Auto & Homes Data Warehousing
Client : MetLife Insurance
Environment : Informatica PC 9.6, DB2, UNIX, WinSCP, Windows 10.

Project Summary:

MetLife insurance is wide across many countries which has many application within it. Likewise Small Market Digital, Disability Evaluation, Panorama, Argentina etc. We used to get raw data in database or in files, through which we develop the business logic as per the requirement of client and provide them with better solutions.

Responsibilities:

- Analyze business requirements and developing Informatica code.
- Implemented new logic to flow FINEOS data from source to target.
- Worked on performance tuning of joiner, lookup transformations, query tuning.
- Written SQL queries in Lookup and Source Qualifier.
- Scheduled the jobs in IBM Tivoli by creating scheduler and jobs files.
- Also involve in monitoring the applications for warranty support.
- Written a UNIX script to automate the Informatica jobs.
- Involved in Unit Testing and resolution of various bottlenecks came across.

Educational Qualification:

- Master of Computer Applications (MCA) from University of Pune

Declaration:

I hereby declare that the information mentioned above is true to the best of my knowledge. If given a chance, I will try my best to make your aspiration come true.

Place : Pune
